Earth Alive MC-2 pucks [®]

Biodegradable larvicide

Formulated to release a long-term larvicide

EA MC-2 pucks [®] slowly release a long-term biological larvicides in water surface. This larvicide gradually settles in the water, and while traveling through water is eaten by mosquito larvae growing there.

13 gr. Earth Alive MC-2 puck

USAGE PER SURFACE AREA OF STANDING WATER

13 grams per 1,000 liter of stagnant water, regardless of depth

Technical Specifications	
Appearance	Round Tablet with a hole in the middle shaped compact powder
Odor	No odor
Packaging	Individual, or bulk
Weight	13 g / unit
Storage	Protect pucks from moisture during storage. Store in a cool, dry place (below 30°C)
Materials to avoid	Alkaline conditions above pH9
Handling	Requires no special personal protective equipment
Shelf Life	Best before 2 years after the date of Manufacture
Mode of Action	EA MC-2 pucks [®] is specially designed to keep water inside the format, floating in stagnant water. As the product slowly dissolves it releases the bacteria, which is toxic only to all species of mosquito larvae.
Application Mode	Mosquito pucks can be attached with a string to prevent from floating away. Allow a minimum of 48 hours for control.
Composition of the product	Active ingredient: Bti 10.31%
